

## Manlift Ticket Langley

Manlift Ticket Langley - The Manlifts and Elevated Platforms program provides training on the rules, regulations and right application of safe operating measures and work practices included in daily activities for individuals who work utilizing this machinery. The program has been designed for individuals who are actively involved in these activities or those who have a basic knowledge of this machine.

Aerial platforms and manlifts have become integral and common machines in industrial settings over the last few decades. These machines provide an easy way to lift employees close to what must be carried out on a stable platform apparatus, enabling workers to carry out tasks with greater safety and comfort rather than being perched on top of ladders or scaffoldings.

The manlift is similar to other industrial devices in that they are safe if used correctly. As they elevate workers above floor or ground level, accidents can occur easily and this may lead to serious death or injuries for both the operators of the manlift as well as any passerby who might not be lucky enough to be standing underneath.

There are various types of manlifts. Nearly all fall into 1 of 2 categories: the articulating boom lift, which has the capability of both vertical and horizontal movement and the scissors lift, which is capable of moving upward and downward.
