

## Forklift Training Classes Langley

Forklift Training Classes Langley - Lift trucks are heavy pieces of industrial equipment that are made use of in transporting and the handling of merchandise and materials. They are often referred to as Lift trucks and are found in all sorts of industries. Personnel working with and around lift trucks must be trained to recognize hazards associated with the operation of lift trucks.

We offer forklift training classes in order to teach our trainees how to safely make use of a lift truck. The theory portion of the program will cover classes and instruction on becoming a lift truck operator. Trainees would learn their legal tasks as lift truck operators. Upon finishing the classes, a printed certificate would be issued. The certificate should be signed by a person authorized to verify that a hands-on evaluation has been done within the trainee's workplace.

### Forklift Safety

Forklift trucks are vital in industrial workplaces for their ability to transport and lift heavy loads. Forklifts are indispensable to many industrial worksites, but forklifts could be dangerous without correctly training staff. Forklift injuries, when they happen, tend to be serious due to the power of these heavy machines. Personnel who work regularly around lift trucks could become complacent and forget the dangers. Important operating and maintenance procedures might be neglected.

Forklift training is required not just for new employees. Periodic re-training is important for all operators. First aid training is essential also.

Daily inspection procedures are of critical importance. Forklifts could become damaged if they are not checked regularly. Before being utilized, forklifts should be visually checked as to their general condition. An operational check needs to be carried out to be able to determine the machine is correctly working. The supervisor should be alerted if anything is noted which could impact the safe utilization of the forklift.

Checks must involve checking the work place to make sure it is clear of objects which might be a problem. Overhead objects and obstructions must be inspected as well. It is important to have a working fire extinguisher accessible and available. Different levels must be checked, such as engine oil, fuel, radiator water, and electrolyte levels in cells. Battery, cables and plug should be checked. Clean out vent caps and make sure that nuts, bolts, chains, guards, and hydraulic hose reels are not missing, loose or damaged. A tire check would make sure that wheels are not damaged or worn. Pneumatic tires would require a pressure inspection.
